Cracking/Collapsing on Bridger Ridge

Bridger Peak
Bridger Range
1/18/2020
Code
Elevation
8500
Aspect
SE
Latitude
45.77010
Longitude
-110.94000
Notes

From obs: "Observed whumping and cracking on a slope <25 degrees, E-SE facing. We were on top of the ridge in a safe place, but it was easy to see how a steeper slope could be triggered by someone on more mellow terrain below or off to the side. While traversing the ridge from the M to Bridger we observed multiple (past) cornice collapses that triggered small or no slides, but also a larger slide in the pinnacles."
