Large Natural Avalanche on Wilson Pk

Date
Sun, 05/07/2023 - 09:30
Activity
Skiing

Natural R3-4, D4 ripped out a large chunk of the south face of Wilson during the last warm period I would assume. Debris everywhere and one large boat-sized pile even scoured a path further down than the rest of the debris. Looked to be a mix of wet loose and wet slab release from high up. Alpha angle at the bottom of the debris was 25 degrees

Region
Northern Madison
Location (from list)
Wilson Peak
Observer Name
Colton Ellingson
