

## Skier remote triggered in YNP near Cooke

Pebble Creek - YNP  
Out of Advisory Area  
1/2/2021  
Code  
SS-ASr-R2-D2-O  
Elevation  
9100  
Aspect  
SE  
Latitude  
45.02540  
Longitude  
-110.03100  
Notes

Skiers triggered a [slide](#) remotely, from low angle terrain, on a 9100' SE [aspect](#). It was a 1.5'-2' deep soft [slab](#) (4F+ to F hard) that broke on weak sugary facets.

From obs: "Did a test pit at same elevation 30' away on S asp in thin area (HS70cm). ECTN6 down15 on new snow interface & ECTN 16 down 35 on the 4F+DF/RG : F, FC interface. We skinned around to the shoulder heard/felt a whumph (similar magnitude/duration/est. dist prop to other whumphs occurring in the last 2 days) and saw the avalanche. [Trigger](#) distance ~15' from first person."

Number of slides  
1  
Number caught  
0  
Number buried  
0  
Avalanche Type  
Soft slab avalanche  
Trigger  
Skier  
Trigger Modifier  
r-A remote avalanche released by the indicated trigger  
R size  
2  
D size  
2  
Bed Surface  
O - Old snow  
Problem Type  
Persistent Weak Layer  
Slab Thickness  
60.0 centimeters  
Weak Layer Grain type  
Faceted Crystals

Weak Layer grain size

2.00mm

Slab Layer Grain Type

Decomposing and Fragmented precipitation particles
