

Absaroka, greater Mill Creek region between 8500' and 9500'...

Date

Wed, 04/28/2021 - 22:29

Activity

Skiing

Observed numerous natural wet loose slides probably occurring over the past 48 hours on NW-W-S aspects mid-elevation. Point releases from rock bands and couloirs shedding. Photo for example, which shows W facing bowl with slides visible from US-89 in Paradise Valley. These are between 8500' and 9500' on an unnamed peak just northeast of Dexter Point. Nothing crazy just thought I'd pass along.

Region

Out of Advisory Area

Location (from list)

Livingston

Observer Name

Natural, wet, loose in the Absarokas
