Activity

Skiing

I quickly ran up the skillet this morning on my way to Jackson. I noticed snow starting to be transported, but no reactive wind slabs yet. Solar aspects had a few inches of new snow on top of a very firm crust layer. On shadier aspects, the snow was very much faceted below the surface and I was sinking almost knee deep. No obvious signs of instability, hope this helps!

Region

Southern Madison

Location (from list)

Bacon Rind
