

Mt Ellis report

Date

Sat, 02/04/2023 - 15:20

Activity

Snowboarding

Skied Mt Ellis today. The burn was heavily wind loaded at the very top but softened significantly as you got lower on the slope. I got an ECTX in my pit, the snowpack seems to be adjusting well to the recent load in this area. There were still multiple layers of concern that would give me pause to step out into bigger terrain throughout the advisory area.

Region

Northern Gallatin

Location (from list)

Mt Ellis

Observer Name

Gage brogan
