

Very large natural on Fisher Mtn.

Fisher Mtn.

Cooke City

3/11/2023

Code

HS-N-R3-D3-O

Elevation

10200

Aspect

E

Latitude

45.06610

Longitude

-109.95900

Notes

From obs "We rode up Lulu Pass at 8AM on 3/11/23 and saw the debris from a large D2.5-3 avalanche on the SE face of Fisher Mtn. Similar [slide](#) path to the large avalanche on Fisher earlier this season."

From GNFAAC 3/12: "Today we rode north of Cooke City and looked at recent natural and Human-triggered avalanches. The [slide](#) on Fisher Mtn. was very large and appeared up to 10 feet deep. It had much more volume in the debris than the [slide](#) that was triggered on this same path in December."

Number of slides

1

Number caught

0

Number buried

0

Avalanche Type

Hard slab avalanche

Trigger

Natural trigger

R size

3

D size

3

Bed Surface

O - Old snow

Problem Type

Persistent Weak Layer

Slab Thickness

72.0 inches

Vertical Fall

600ft

Slab Width

700.00ft
