

Beehive Basin Observations

Date

Sun, 01/14/2024 - 15:55

Activity

Skiing

From email: "Beehive today. HS on an east [aspect](#) at 8740' was 80 cm. F to 4F from 85 to 55, and then a pile of facets broken up by a few thin MFCR interfaces. Interfaces at 55, 45, and 35. 35 to 5 is 2-4 mm 4F DH, sitting on 5 cm P+ MFCR that is also faceting out.

ECT's would initiate at one of the three interfaces, but none of the 5 propagated at all beyond the shovel width. CT13 SC @ 25 within the DH.

Super weak structure, but not a sufficient [slab](#) where we were to drive [propagation](#).

We crossed paths with a party in the lot at the end of the day who descended the east shots into Bear Basin. They found a similar structure and reported no reactivity during their facet pow ski. "

Region

Northern Madison

Location (from list)

Beehive Basin

Observer Name

Josh Lipkowitz
