

Unstable ECT result, bad structure near Crown Butte

Date

Fri, 02/02/2024 - 16:45

Activity

Snowmobiling

After riding around in Miller zone rode up towards the east Crown Butte avalanche from this week to take a look!

Dug near the old cabin structure HS 100cm -140cm in area

210 deg aspect, @ 9380 ' on a 10deg slope

HS 110cm, ECTP28 on 3-4mm facets 20 cm up from ground.

Notes: solars and low elevation slopes formed a thin breakable crust over the last three days, under the crust in many places is a thin layer of faceting snow on top of a hard slab.

Region

Cooke City

Location (from list)

Daisy Pass
