

Windslab avalanche in bear basin

Date

Sun, 02/25/2024 - 11:10

Activity

Skiing

Went up to the prayer flags today. On the ridge about 100yards below the flags I went to the end of the cornice and gave it a stomp. Triggered a windslab that propagated about 50 to the left.

HS-ASc- D1-R1-I

The crown was roughly 1-1.5 ft deep in the most wind loaded area.

Multiple slides have went on this slope already this year, some running a good distance down through the trees.

Region

Northern Madison

Location (from list)

Bear Basin

Observer Name

Jay Alford
