

poor test scores near history rock

Date

Sat, 03/23/2024 - 13:05

Activity

Snowboarding

at history rock today we did an extended column test and a regular column test. Both tests were performed a few feet from one and other, and both pits were dug to the ground on a 26ish degree slope. The extended column test fully propagated on the 4th tap from the elbow scoring ectp 14. The regular column test failed after one tap from the wrist. Both failed on the sugary facet near the bottom of the snowpack I did not record any exact depth measurements or perform further tests. estimated coordinates (45.48811,-111.00942) I think it was the first powder field.

Region

Northern Gallatin

Location (from list)

History Rock

Observer Name

Nathan Ross
