BSSP triggered avalanches on facets and wind slabs

Date Tue, 11/26/2024 - 01:05

Big Sky Ski Patrol triggered this avalanche during mitigation work in The Wave on 11/26/24... "2-3' deep on an ice crust just above the ground with a 2# shot in the Upper rodeo. Volume was limited as most of the snow was loaded just underneath the <u>cornice</u>, but still produced a sizeable size 2... Other paths in the Lenin region ran meaty wind slabs, full <u>track</u> with no significant step downs." Photo: BSSP
