

Large Whumph at Blackmore

Date

Sun, 12/15/2024 - 17:10

Activity

Skiing

I observed a large whoomph about 150ft from the ridge (top of glades) going up Blackmore today while breaking trail. was definitely wind loaded area... I could feel the energy in the snowpack today once I got up higher, super sensitive it seems. ECTN 14 in my pit I dug lower down the meadow with no [wind slab](#) prevalent.

Region

Northern Gallatin

Location (from list)

Mt Blackmore

Observer Name

B. Neiberger
