

Ross Peak Meadows

Date

Sat, 01/04/2025 - 13:30

Activity

Skiing

Toured up to the low angle meadows on the NE shoulder of Ross Peak. Dug a 8000ft and found no action in an extended column test but a significant result in a propagation saw test (PST END 20/100) at about 90 cm down. Some recent small avalanches in steep terrain along Brackett Creek that broke naturally within the storm snow from 1/3.

Region

Bridger Range

Location (from list)

Ross Peak

Observer Name

Christopher Pruden
