

The avalanche path is more obvious from a distance, but not from the road. Daisy Pass is up to the road to the left of the picture. Due to a reloading of the slope and a HIGH avalanche danger we were unable to hike up and investigate the snowpack. We are unsure if this slide was a natural or human triggered. The crown was likely at the top of the slope (estimated to be 600 feet vertical), but we could not confirm this. Photo: GNFAC
