Snow Pit Profile

Yellowstone Club Norther Madison, MT Elevation (ft) 9300

Observer: Eric Knoff Fri Dec 05 23:59:00 MST 2014

Co-ord: N W Slope: 25

Stability on similar slopes: Poor

Stability Test Notes:

Layer note

10-20: Pro

Air Temperature: C Sky Cover: Clear Precipitation: None

Wind: Calm

30 Wind loading: previous Aspect:

I K P 1F 4F F
Notes: ECT's were taking hard force, but facets near the ground were propagating consistently. It's working towards a low probability high consequence. The weakest snow seems to exist on shady aspects in upper elevation terrain.

Advisory Region Northern Madison
